<ul> <li>Configure Princips</li> <li>Summing</li> </ul>	Step 2 - Configure User Database	
You may cancel this without of any true by clicking on the Cancel batton	Now select the mechanism by which Addio obtains information about users and performs authentication. By default the Built-Immechanism is available, although extensions may provide more. Some user databases may require further configuration, Active Directory being one.	
	<ul> <li>Active Directory</li> </ul>	
	Addic will integrate with your network's Addive Directory server allowing users to use the same logan createritatis as they would use for other Windows resources. Roles will map to your Active Directory groups.	
	Built-in	
	Adito will use its own internal database of users and groups. If you use this User Database, you will also be able to create, edit and remove users and groups.	
	Users will be retrieved and authenticated using the local /etc/passwed, /etc/chadow and /etc/group files. This option is currently known to work on Linux and Solaria servers.

Install Install 1. Contigure Certificate 2. Contigure User Database 3. Contigure Super User	Install Welcome to the Adito installation wizard. You will now be guided through the process of configuring the basic options to get the Adito secure service. When complete, you should start the service, logon as the super user and start building the facilities you will make available to your users. You may return to this wizard at any time.
Configure Proxies     Configure Proxies     Sconfigure Proxies	Step 3 - Configure Super User         Adito has a special user known as the Super User. By default, this user may always logon from the localitost and is not subject to any of the usual logon contraints.         It is strongly recommended that you disable this user once you have completed configuring Adito and have delegated management rights to other users.         Please select the user you wish to configure as the super user. If the underlying user database supports password changing you may also configure the password (leave field blank if you do not wish to change the password).         • Usemame:
