- Take a Look → Control Panel and Apps
- The Possibilities...
- W.D.A.D.?
- What's next for Amahi?
- Questions

What is Amahi?

- Open Source
- Easy to Use
- File Sharing and Storage
- Media Streaming
- Disk Pooling (GreyHole)
- One-Click App installation
- Multiple VPN protocols
- Easy Backups
- Dynamic DNS
- and more...

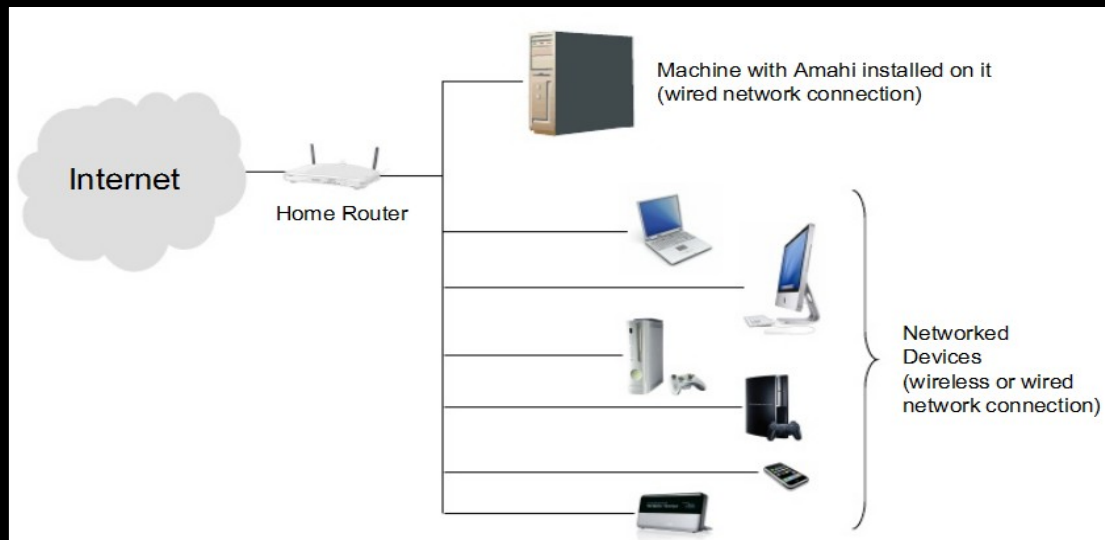

Hardware

Installation

- Ubuntu 32/64 bit, Desktop or Server 12.04 LTS
- Bootable Fedora 14 install DVD and Amahi Repo
- Turn off DHCP in Router
- Static I.P. address at 192.168.1.10
- Check Gateway address
 - 192.168.0.1 vs 192.168.1.1

Installation

- All of the Fedora installation happens before the first reboot because of the added repo.

```
Terminal

Re: **Unauthorized Use of Apple Inc.'s APP STORE Trademark**
[REDACTED]

Dear Mr. Puchol,

We represent Apple Inc. ("Apple"), the internationally famous technology company and the designer, distributor, and/or manufacturer of a broad array of goods and services in the computer, technology and consumer electronics fields. Since 2008, Apple has been using its APP STORE trademark in connection with a service which allows users of Apple's iPhone®, iPod touch® and iPad® devices and users of computers running applicant's iTunes® software to browse for, purchase and download a wide range of third party software programs, including games, business, educational, finance, news, sports, productivity, social networking, health, reference, travel, and utility software for the iOS platform.

Apple's APP STORE mark, as a result of the hundreds of thousands of programs offered on Apple's APP STORE service, the millions of users that have accessed the service, and the billions of downloads obtained by such users through the service, has become one of the most famous marks in the field of online computer software and information services. In view of the extensive goodwill and fame of the APP STORE mark, Apple has developed broad and exclusive rights in and to the mark to prevent third party use of similar terms that are likely to cause confusion. Apple owns multiple trademark applications and registrations for APP STORE throughout the world, including in the European Community, Australia, New Zealand, Mexico,

OpenVPN ALS (project Adito) is a web-based VPN server written in Java.

In other words, it's a webapp that lets you go into your network over a web browser, in a secure manner (if you configure it to use https) as if it were via VPN.

OpenVPN ALS has a browser-based AJAX UI which allows easy access to intranet services. Once installed (and with SSL configured) you will be able to access all your server files and the HDA (to include most applications) using `https://user.yourhda.com` (tested with Firefox and Internet Explorer).
